Experience

Software Developer
Threadflip
2013-Present

I did full stack development with **rails**, **coffeescript**, and **backbone**. I worked on user facing features, internal tools, refactoring, and optimization.

Software Devloper
Vitame.com
2014-Present

I contract with Vitame in my spare time as the sole developer on a legacy **rails** app. I troubleshoot issues, fix bugs, and add features.

Software Engineer
Expensify.com
2011-2013

I was an early developer at this SAAS Expense Reporting startup. I worked on both the **PHP** backend (bank integrations, a **mechanical turk** system, html receipt parsing, among other things) and the heavy **JS** frontend (tiered feature-sets, report permissions, dropbox integration).

Web Developer
RIT School of Film and Animation
2008-2011

I was the primary developer for a db-driven site for film students to organize their projects. This was in **PHP + MySQL + CodeIgnitor**. I worked on this through a successfull launch and subsequent maintenance while I was taking classes.

Misc

Co-ops: 6 months each at Parse3 (C#), IBM (JS), and GE MDS (Java)
Earlier: 2 years tech support, 2 years dishwasher, 5 years stable hand

Projects

BeanSpeed.com
github.com/kkuchta/coffeewifi

A rails + backbone site for comparing the wifi speeds at nearby coffeeshops. Uses google maps, the yelp api, and a speed-test tool.

Vimbits.com
github.com/kkuchta/vimbits

A Rails site for trading snippets of Vim configuration I did to scratch my own itch. Browse 'top', 'hot', 'new', and 'random' vimrc snippets. Has user account, tags, code highlighting.

Other Projects

SFRentalApp.com, a JS Physics Engine, an infinite-scrolling random Imgur wall, a social-media campaign manager, a crime-rate service called "Danger Zone", a facebook collage maker (on a 5-person team), Ubimenu, mobile menus as a service.

Education

BS in Software Engineering, 2011
Rochester Institute of Technology

Other Interests

Homebrewing, Photography, Travel, Rock Climbing
